```

```
```md
```

```
DDoS Guard – Full Stack Detection System
```

A full-stack DDoS detection app with a React frontend, Express/Mongo backend, JWT authentication, role-based authorization, server-side validation, incident logging, and an attack simulation engine.

```
What's included
```

- Responsive React frontend built with Vite
- Express.js REST API backend
- MongoDB database support for users and incidents
- JWT authentication with secure token-based sessions
- Admin / analyst role-based authorization
- Request validation via Joi
- Global error handling middleware
- Real-time simulation via Server-Sent Events
- Clean project layout with separated frontend and backend code

```
Run the project
```

```
1) Configure environment variables
```

Copy ``.env.example`` to ``.env`` and update the values:

```
```powershell  
copy .env.example .env  
```
```

```
2) Start the backend
```

```
```powershell  
cd server  
npm install  
npm run dev  
```
```

```
3) Start the frontend
```

```
```powershell  
cd frontend  
npm install  
npm run dev  
```
```

```
4) Access the app
```

Open the URL shown by Vite (typically `http://localhost:5173`).

### ## API Endpoints

- `POST /api/auth/signup` – create a new user
- `POST /api/auth/login` – authenticate and receive JWT
- `GET /api/auth/me` – return current user profile
- `POST /api/predict` – submit flow data for attack detection
- `POST /api/simulate/start` – start attack simulation (authenticated)
- `POST /api/simulate/stop` – stop simulation (authenticated)
- `GET /api/simulate/stream` – subscribe to SSE traffic metrics
- `GET /api/metrics` – performance summary
- `GET /api/incidents` – incident history (authenticated)
- `GET /api/users` – admin-only user list

### ## Notes

- The app uses MongoDB when `MONGO\_URI` is configured.
- If MongoDB is unavailable, the server falls back to in-memory storage.
- JWT secrets must be set via `JWT\_SECRET` in `.env`.
- The Flask ML microservice is optional; if unavailable, predictions will return a fallback error.
